

*AMENDMENTS TO THE SPECIFICATION*

Replace the paragraph beginning at page 13, line 13 with:

Figure 23 shows in (a) a restriction enzyme analysis of the wild-type MCMV and MCMV-Kn5 genomes. The DNA isolated from the infected cells was digested with HindIII and separated in agarose gel. Figure 23 (b) shows the sequencing of the clone MCMV-Kn5 with primers which bind to the ends of the transposon. The sequence obtained (SEQ ID NO: 1) is compared with the MCMV sequence (SEQ ID NO: 2).
